Install Automation Limited

109-111 Pope Street

Birmingham

BI 3AG

Today's modern homes are being filled with more and more technology. As an architect you will no doubt be attracted to a system which can both improve the aesthetics of a home and enhance the home owner's living experience.

At Install Automation Ltd we are dedicated to delivering breathtaking levels of convenience, enjoyment, security and control in the home environment through our fully integrated systems.

Envisage a home electronic system designed and installed to reflect your architectural design and your customer's lifestyle and personality. One that is intuitive to operate and where everything blends perfectly with your interior design.

Install Automation can provide:

- Multi-room audio & visual entertainment
- Home cinema
- Lighting systems
- Climate control systems
- Security systems
- Telecoms/ Intercoms systems
- Touch panel controls
- Remote access/monitoring
- Distributed internet access
- Planning, consultation, installation.

Designing and installing an integrated electronic home demands expert product, systems and applications knowledge, along with specific project management and installation skills. As a registered Cedia member, Install Automation aim to provide all of this and more. From planning to completion, we help to make dreams a reality.

In today's society it is becoming more and more important to live in an energy efficient home. With a specially designed lighting system, your client will have the ability to save energy and money by varying the level of light output. An automated system also means that you can ensure all sources are switched off when you leave, saving even more energy.

If you have any upcoming projects in which you may wish to include an automated system, then please do not hesitate to contact us. We would be happy to advise on any project and look forward to viewing your plans.

The Project Process...

Firstly, working from a set of your layout and design plans, Install Automation can provide an initial budgetary quotation for your project.

We will also invite you and your client to view our 8000 sq.ft. demonstration property, off the M42/M40 in the Midlands, giving you an excellent idea of what can be achieved in an automated home. Working together with both client and architect, we can design a system to suit a range of project requirements.

Once a specification has been agreed, Install Automation will deliver a pre-installation instruction guide and detailed cable diagram to your electrical contractor for initial infrastructure cabling.

At the second fix stage of the development our experienced installation technicians will arrive on site to oversee termination of cables, if required, and prepare the infrastructure for installation of the system.

All interim work, including system programming and hardware assembly, is carried out in our newly refurbished development centre in Birmingham. Components are then shipped to site pre-built, completing the installation.

To finalise the project our team will spend time with the client and provide a step-by-step guide on how to operate the system. This will be backed up with appropriate paperwork for each component and we will also include a detailed operation manual, explaining exactly how the system performs.

Throughout the design and installation processes our company aims to provide both client and architect with practical information and advice. This service extends beyond the installation and our after sales service team will be on hand to resolve any problems with our systems and answer any questions you may have.

Maintenance contracts are available to purchase, guaranteeing hardware past the standard manufacturer's warranty, and also giving your end user the option to make changes to the system, should their requirements change over time.
