## **INSTALL AUTOMATION EXHIBITING A UK FIRST AT INTERBUILD**

Stand D49, Hall 5 - Grand Designs Live 2009, 18-21 October, NEC Birmingham

Install Automation are exhibiting at Interbuild in October. The focus is on Install Automation's new real time energy readouts and load controls, a first for the UK market.

The clear OpenAV display enables users to see how much energy the property is consuming and switch of sources accordingly, all from one display. The energy management system will enable users to read how much power the property is producing and adjust accordingly. The installation of this system will future-proof the property, adding value, as well as saving the user up to 40% in energy bills and helping to preserve the environment.

During the show, guests can visit the stand to experience the energy management system and Install Automation's modern, sleek home automation systems, including lighting, security monitoring and entertainment such as Apple TV and Sonos. Install Automation will also be demonstrating the new iPhone application and interface designed to control all aspects of the home automation system, which means an end to remotes and wall panels. The company is also displaying audio video and high definition distribution.

Adam Kent, Managing Director of Install Automation says, "We are very pleased to be exhibiting at Interbuild again this year. Each year we meet some fantastic people who are really passionate about the industry, just as we are. Our stand will be very exciting this year and we cannot wait to show our new technology."

Install Automation is now in its 10<sup>th</sup> year of providing customers with tailored home automation solutions. Typical projects range from a single cinema room to a 30,000 sq ft residential build.
